QUEENSLAND ENERGY AND JOBS PLAN

Power for **generations**

The Queensland Energy and Jobs Plan will start to build the new Queensland SuperGrid – the renewable energy, storage and network infrastructure we need to power our industries, businesses and homes. This investment will create more jobs in the regions and beat our 50% renewable energy target by 2030.

What does the Plan mean for manufacturing?

Better outcomes for manufacturers, local demand, a clear pipeline and support to decarbonise.

The Plan outlines how Queensland will position the manufacturing sector to capitalise on the opportunities presented by the energy transformation, including the pipeline of clean energy infrastructure and for local manufacturing.

$7.1 million for up to 400 manufacturers to reduce energy costs and emissions.

$500 million for **more batteries and storage**, creating a pipeline of demand.

Support for manufacturers to investigate end-of-life and recycling opportunities.

A focus on local content for renewables, storage and network investments in Queensland Renewable Energy Zones regions.

$4.5 million to build manufacturing capacity and encourage local content.

Publicly-owned energy businesses committed to **'Buy Local'**.
